2,050
regulatory report fields with a DRR rule, all reports

65 / 65
MiFIR TR (RTS 22) fields with a DRR rule

How DRR produces a report

DRR starts from a CDM 7.9.0 WorkflowStep. Enrichment adds what CDM does not hold, such as the LEI, the UPI and the reporting regime and side; DRR leaves this lookup to the user. The enriched event becomes one of three report inputs. Each report has an eligibility rule and, for every field, a reporting rule. A projection then turns the report into the file format the regulator or trade repository accepts.

Coverage at a glance

MiFIR TR is covered. The EU MiFIR RTS 22 transaction report is in DRR 8. All 65 fields have a DRR rule, and the output is an LSEG UnaVista ARM CSV file. There is no UK MiFIR (FCA) transaction report. See the ESMA - MiFIR page.

Trade = the full trade report to a trade repository. MiFIR TR = the MiFIR RTS 22 transaction report to the regulator, sent through an ARM. Public report = CFTC Part 43, CSA PPD and SEC PPD. Transparency = MiFIR RTS 1 and RTS 2, published through an APA. Every report in DRR is declared "in T+1".

The three report inputs

Input (DRR type)	Used by	What it holds
`TransactionReportInstruction`	all Trade, Public and MiFIR reports (15)	The originating CDM WorkflowStep, the reportable trade (TradeState) or position, the reporting side (reporting party, other counterparty, party responsible for reporting, report submitting party) and the reportable information (regime and jurisdiction details). `regulation-common-type.rosetta:40, base-trade-type.rosetta:16-32`
`ValuationReportInstruction`	all Valuation reports (8)	The valuation, trade identifiers, UPI, action, collateral details, reporting level (trade or position), the reportable information and the reporting side. `regulation-common-type.rosetta:55-68`
`CollateralReportInstruction`	all Margin reports (8)	The collateral details (timestamp, collateral, trade identifier, action, collateralisation category), the reportable information and the reporting side. `base-margin-type.rosetta:10-23, regulation-common-type.rosetta:51`

Shared building blocks

Each step extends the one before: a report inherits fields and rules, and can override or empty them.
ASIC, HKMA, JFSA and MAS trade reports, and all valuation and margin reports, have no regime family step.

Shared rules

standards-iosco-cde-*
regulation-common-*
base-trade-*

Enrichment

PreEnrich: LEI, person IDs
UPI from ANNA DSB, CFI code
PostEnrich: jurisdiction

Standards DRR cites

CPMI-IOSCO CDE Technical Guidance v1, v2, v3
CPMI-IOSCO UPI Technical Guidance
ISO 20022

Only trade, public and MiFIR reports are built on the IOSCO CDE types. Valuation and margin reports each have their own separate set of critical data elements. Most report fields are not written once per regulator. A report type inherits its fields from shared types, and many rules call shared rules. A regulator's file only holds what differs for that regime. This is why the same field can show the same rule across several regulators.

1 ASIC — Australia

The Australian Securities and Investments Commission is an independent commission of the Australian Government tasked as the national corporate regulator.

Regulations and documents DRR cites

- DTCC message specifications for the ASIC rewrite (v0.6)

> DRR names the ASIC rules only through the DTCC specification; no ASIC rule text is listed as a separate source.

Report	Input	When it applies	Regulatory fields with a rule	Output format	Where in DRR (rosetta-source/src/main/rosetta)

2 CFTC — United States

Commodity Futures Trading Commission (CFTC): The Federal regulatory agency established by the Commodity Futures Trading Act of 1974 to administer the Commodity Exchange Act.

Regulations and documents DRR cites

- CFTC 17 CFR Part 45 (swap data reporting), versions 3.0, 3.1 and 3.2
- CFTC 17 CFR Part 43 (real-time public reporting), base version, 3.1 and 3.2
- DTCC message specifications for CFTC

> Part 45 is the full swap data report to the swap data repository. Part 43 is the public (real-time) report. DRR also lists four US swap data repositories: DTCC, CME, ICE Trade Vault and KOR.

Report	Input	When it applies	Regulatory fields with a rule	Output format	Where in DRR (rosetta-source/src/main/rosetta)

Part 45 trade
`report CFTC Part45`

3 CSA — Canada

The Canadian Securities Administrators (CSA) is the umbrella organization of Canada's provincial and territorial securities regulators whose objective is to improve, coordinate and harmonize regulation of the Canadian capital markets.

Regulations and documents DRR cites

- CSA Derivatives Data Technical Manual 2024, version 1.0 (the provincial TR Rules 91-507 and 96-101)
- DTCC message specifications for CSA

> PPD is the public dissemination report.

5 ESMA - MiFIR

European Union

ESMA is an independent EU Authority that contributes to safeguarding the stability of the European Union's financial system by enhancing the protection of investors and promoting stable and orderly financial markets.

Regulations and documents DRR cites

- MiFIR - Regulation (EU) No 600/2014
- RTS 22 transaction reporting - Delegated Regulation (EU) 2017/590
- RTS 1 transparency, equity - Delegated Regulation (EU) 2017/587
- RTS 2 transparency, non-equity - Delegated Regulation (EU) 2017/583
- ESMA65-8-2594 MiFIR transaction data validation rules
- LSEG UnaVista MiFIR EU ARM specification; MarketAxess APA FIX 5.0 SP2 specification

RTS 1 and RTS 2 are post-trade transparency reports published through an APA (MarketAxess in DRR). Their fields without a rule are the publication fields, which the APA fills.

MiFIR transaction reporting (MiFIR TR) is supported in DRR 8

- MiFIR TR is the RTS 22 transaction report. It goes to the national regulator through an ARM (not a trade repository); DRR produces the LSEG UnaVista ARM CSV file.
- DRR models **all 65 RTS 22 fields** and **every one has a DRR rule**: field 34 (price currency) through the shared CDE rule, the rest through MiFIR rules.
- The count of 51 in the table below is report entries, not RTS 22 fields. Buyer and seller details (fields 7 to 24) are four entries with one rule each, so 51 entries hold the 65 fields. The table lists separately the 22 UnaVista-only fields (UVInternalFields) and 1 internal field (Systematic Internaliser).
- Only the EU regime is in DRR 8; there is no UK MiFIR (FCA) transaction report.
- Eligibility is a placeholder (always true, a "demonstrative eligibility rule for display"); you decide which trades are MiFIR-reportable.

Report	Input	When it applies	Regulatory fields with a rule	Output format	Where in DRR (rosetta-source/src/main/rosetta)

MiFIR TR (RTS 22 transaction report)
`report ESMA MIFIR RTS22`

6 FCA - UK EMIR

United Kingdom

The Financial Conduct Authority is the conduct regulator for 58,000 financial services firms and financial markets in the UK and the prudential regulator for over 18,000 of those firms.

Regulations and documents DRR cites

- FCA / Bank of England Policy Statement PS23/2 (UK EMIR reporting changes, technical standards, rules for TRs)
- UK EMIR validation rules applicable from 30 September 2024
- ESMA74-362-2281 guidelines and ESMA Q&A on EMIR reporting

Report	Input	When it applies	Regulatory fields with a rule	Output format	Where in DRR (rosetta-source/src/main/rosetta)

7 HKMA

Hong Kong

The Hong Kong Monetary Authority (HKMA) is Hong Kongs central banking institution.

Regulations and documents DRR cites

- HKMA Appendix B - list of supported data elements and validations, ISO 20022 (v1.0), for HKTR reporting

> Each HKMA report has two output routes in DRR: one for DTCC and one for the HKMA trade repository (HKTR).

Report	Input	When it applies	Regulatory fields with a rule	Output format	Where in DRR (rosetta-source/src/main/rosetta)

Trade
`report HKMA Trade`

8 JFSA — Japan

The Japanese Financial Services Agency is a Japanese government agency and an integrated financial regulator responsible for overseeing banking, securities and exchange, and insurance sectors in order to ensure the stability of the financial system of Japan

Regulations and documents DRR cites

- DTCC message specifications for the JFSA rewrite

Report	Input	When it applies	Regulatory fields with a rule	Output format	Where in DRR (rosetta-source/src/main/rosetta)

Trade
`report JFSA Trade`
	Trade event
	`TransactionReportInstruction`
		Always true (placeholder)

					`JFSAMarginReport`
					`regulation-jfsa-rewrite-margin-type.rosetta:13`

9 MAS — Singapore

The Monetary Authority of Singapore (MAS) is Singapores central bank and integrated financial regulator. MAS also works with the financial industry to develop Singapore as a dynamic international financial centre.

Regulations and documents DRR cites

- Securities and Futures (Reporting of Derivatives Contracts) Regulations 2013
- DTCC message specifications for the MAS rewrite

Report	Input	When it applies	Regulatory fields with a rule	Output format	Where in DRR (rosetta-source/src/main/rosetta)

Trade

10 SEC — United States

U.S. Securities and Exchange Commission (SEC) is a U.S. federal regulatory agency responsible for broad authority over all aspects of the securities industry. The SEC's mission is to protect investors, maintain fair, orderly, and efficient markets, and facilitate capital formation.

Regulations and documents DRR cites

- Regulation SBSR - reporting and dissemination of security-based swap information (17 CFR 242.900 - 242.909)
- DTCC validation rules / message specifications

> SEC covers security-based swaps. PPD is the public dissemination report. There is no SEC valuation or margin report.

Report	Input	When it applies	Regulatory fields with a rule	Output format	Where in DRR (rosetta-source/src/main/rosetta)
Trade `report SEC Trade`	Trade event `TransactionReportInstruction`	Always true (placeholder) `ReportableProduct`	**116** +31 repository-only +3 internal	DTCC RDS Harmonized XML	`regulation-sec-rewrite-trade-rule.rosetta:27 SECTransactionReportTrade` `regulation-sec-rewrite-trade-type.rosetta:1276`
PPD (public) `report SEC PPD`	Trade event `TransactionReportInstruction`	Always true (placeholder) `ReportableProductPPD`	**88** +32 repository-only +3 internal	DTCC RDS Harmonized XML	`regulation-sec-rewrite-trade-rule.rosetta:32 SECTransactionReportPPD` `regulation-sec-rewrite-trade-type.rosetta:1776`

Points to know

- **Eligibility is mostly a placeholder.** 28 of the 31 eligibility rules always return true, and 23 of these are described in the code as a "demonstrative eligibility rule for display". DRR expects the user to decide which regimes a trade is reportable to, during enrichment (PostEnrich: "custom implementation looking up reportable information"). Only three reports filter in DRR: ASIC Margin and ESMA EMIR Margin (only when there is collateral) and ESMA EMIR Trade (only when there is a contract).
- **Copy errors in DRR eligibility rules.** FCA UK EMIR Trade says "When eligible for JFSA" and MAS Valuation says "When eligible for ASIC" (both always true, so the logic is unaffected). The two ASIC Margin filter rules (IsCollateralReportable, HasCollateral) quote EU EMIR text (Article 9, and Directive 2004/39 in the derivative definition) as their source. Two rules that no report uses are also wrong: CFTC HasContract has the provision "add text here", and ESMA EMIR IsReportableEvent says "When eligible for Part45".
- **One report type is defined twice in DRR.** MIFIRTransparencyReportRTS1 is in regulation-esma-mifir-rewrite-transparency-rts1-type.rosetta:17 (the one the RTS 1 report uses, built on MIFIRCommonTransactionReport) and again in regulation-esma-mifir-rewrite-trade-type.rosetta:1465 (built on CommonTransactionReport, in a different namespace, and used by no report).
- **Not every report has an output format.** CFTC Margin and CSA Margin have no projection in DRR, so DRR produces the report but not a file for the repository.
- **MiFIR TR is complete. Transparency leaves the publication fields to the APA.** All 65 RTS 22 fields have a DRR rule. RTS 1 has 11 of its 14 labelled fields with a rule and RTS 2 has 16 of its 20. The fields without a rule are the publication fields, which the APA fills.
- **"Regulatory fields with a rule"** counts every report field, including fields inside a leg or other block, that has a DRR reporting rule after inheritance and overrides (2,050 in all). Shown separately: **repository-only** fields that only the file format needs (DTCC additional fields for CFTC, CSA and SEC, and UnaVista fields for MiFIR TR; 303 in all) and **internal** fields that DRR marks as non-reportable and never sends (66 in all). With these the total is 2,419. Fields with no rule are either filled by the projection, emptied on purpose for that regime, or not yet modelled.
- **Several regulators reference only a repository specification.** For ASIC and JFSA, DRR cites only the DTCC message specification; for HKMA, only the HKMA ISO 20022 data element list.

How this was checked

Every number in this document was read from the DRR 8.0.0-upg.9 source code: the `report` statements (31), the `eligibility rule` bodies, the report types and their `extends` chains, every `[ruleReference ...]` including the `for <path>` and `empty` forms, the `body` and `corpus` statements (regulators and documents), and the `[projection ...]` functions (32). The code was compiled without errors with Maven before this review. File names and line numbers point into `digital-regulatory-reporting-8.0.0-upg.9/rosetta-source/src/main/rosetta`.
